

Screw Grip

Description

Screw Grip is a paste-like fluid which hugely increases the friction between the tool and the screw or nut being turned. Screwed connections which are relatively inaccessible can therefore be protected from damage and screws which have already been damaged can be unscrewed easily.

Properties

- also suitable for overhead work
- no materials on the tool wallet
- simple to use
- clean application
- increases the friction

Technical data

Base	Hartkristalle unterschiedlicher Korngröße / hard crystals of various different grain sizes
Color / appearance	grau / grey
Form	pastös / pastelike
Shelf life in transit up to	mind. 5 Jahre in verschlossenem Zustand / min. 5 years in unopened tube
Odor	mild

Areas of application

Screw Grip is suitable for unscrewing all slot, cross, Torx and socket head screws as well as hexagon head screws.

Application

Shake well before use. Place a single drop of Screw Grip in or around the damaged screw head. Repeatedly accurately position and move tool so that the crystals anchor into each other. The tool will soon find its grip and the screw can be loosened without any difficulty.
